Stage 2 — Code Sanity QA Report

Page / Client: 2026 Buick Enclave Avenir · Nick Mayer Buick GMC of Dickson **Built page:** `2026_Buick_Enclave_Avenir.html` (DealerOn, dealer-31568) — rendered offline from the supplied file **Page type:** Model **Approved copy source:** `2026-Buick-Enclave-Avenir-Dickson-REVISED (1).docx` — note: this copy has NOT passed Stage 1. Stage 1 was run on it the same day and returned GATE: FAIL (2 fail, 9 needs input). Stage 2 is being run out of order at the reviewer's direction. **Reviewed:** 2026-09-01 **Reviewed by (skill):** stage-2-code-sanity-qa **Breakpoints tested:** 375 / 768 / 1280 / 1440

Verdict

19 checks · 6 pass · 8 fail · 5 needs input → GATE: FAIL

The build diverged substantially from the draft it was built from. The headline failure is that **all three triple-semantic bullet lists were removed** and replaced with comma-list prose and two new marketing modules, which strips out the most extractable content on the page. The build also added a section naming two cities outside the 30-mile radius, dropped the Sources section entirely, changed the H1, uses five bold runs as pseudo-headings, ships no `Offer` schema, carries three `AggregateRating` blocks with no visible reviews, and overflows horizontally at 768 px. Design checks (color, font, template) are unscored because no brand guideline or location template was supplied for this rooftop.

One structural item needs a decision before anything else: the page's schema asserts two different dealer domains for the same business, and the platform's own data suggests the store's name may include Chevrolet. See the AutoDealer row.

2.1 Content consistency

Check	Verdict	Finding	Suggested fix
Built text = approved copy (word-for-word)	FAIL	The build is not the approved copy. **(1) All three bullet lists are gone.** "Powertrain Highlights" (7 bullets), "Interior Highlights" (9 bullets), and "Technology Highlights" (9 bullets) do not exist on the built page. Interior and Technology were collapsed into single comma-list sentences ("Additional interior highlights include premium quilted and perforated leather-appointed seating, ventilated front seats, ..." / "Additional technology includes HD Surround Vision, an interior camera, ..."). Powertrain's bullets were replaced by a reworded "Key Facts" module that inverts the subject ("The 2.5L Turbo four-cylinder produces 328 horsepower" instead of "The Enclave Avenir produces 328 horsepower"). This is the most consequential divergence on the page: 25 discrete entity statements became 2 comma lists plus 8 reworded lines. **(2) Three sections added that are not in the approved copy:** "Key	Rebuild the body from the approved copy. Restore the three bullet lists verbatim as `<ul>` markup — they are the page's liftable triples and the reason the copy was written that way. Delete the three unapproved sections, or send them back through Stage 1 as new copy (the Clarksville/Waverly line cannot ship either way). Restore the Sources section and the Autoblog URL. Remove the duplicated towing sentence. Restore

Check	Verdict	Finding	Suggested fix
		Facts About the 2026 Buick Enclave Avenir", "2026 Buick Enclave Avenir Highlights at a Glance", "Why the 2026 Buick Enclave Avenir Fits Dickson-Area Drivers". **(3) The added "Fits Dickson-Area Drivers" section names Clarksville (~45 mi) and Waverly (~35 mi)**, both outside the 30-mile rule and neither present in the approved draft. **(4) The entire Sources section is absent** — all seven citations from the approved copy were dropped, and the Autoblog inline link became a bare "Source: Autoblog, 2026 Buick Enclave review" with no URL. **(5)** One sentence is duplicated: the 5,000-pound towing line appears both appended to the powertrain paragraph (not in the approved copy at that position) and in Key Facts. **(6)** The Cars.com paragraph and the following Nick Mayer sentence are swapped relative to the approved order. **Clean:** `content_diff.py` confirms no em-dash, en-dash, or smart quote was reintroduced by the build.	the approved paragraph order in the reviewers section.
H1 / headings match approved structure	FAIL	Four divergences. **H1 text changed:** approved "2026 Buick Enclave Avenir in Dickson, TN" → built "2026 Buick Enclave Avenir for Sale in Dickson, TN", which adds "for Sale" and contains a doubled space (` ` plus a literal space) before the city. **Three approved subheadings missing:** "Powertrain Highlights", "Interior Highlights", "Technology Highlights". **FAQ heading truncated:** approved "Frequently Asked Questions About the 2026 Buick Enclave Avenir" → built "Frequently Asked Questions", which drops the entity from a heading answer engines read. **Section order changed:** the Avenir-Specific Exterior Equipment section moved from position 4 to after both evidence sections, and "Nick Mayer Buick GMC of Dickson Helps Drivers Explore the Enclave Avenir" moved from before the FAQ to after it.	Set the H1 to the approved string and remove the doubled space. Restore the three subheadings and the full FAQ heading. Restore the approved section order, or get the reordering approved in writing if the build order is deliberate.
FAQ rendered in the DOM (not JS-only/collapsed)	PASS	All 7 questions and all 7 answers are present in the static HTML as `<details>` / `<summary>` markup inside `.faq-container`, with no JavaScript dependency, and each answer matches the approved copy verbatim. The answers are collapsed by default, so they do not appear in the probe's rendered visible-text capture — I verified them directly in the source rather than treating the probe's question-only text as the finding. `<details>` content reaches the DOM and is crawlable, so this passes.	None. Worth noting for Stage 3: collapsed-by-default is fine for crawlability but the FAQPage schema and the DOM must stay in sync if the answers are ever edited.

2.2 Design consistency (per brand)

Check	Verdict	Finding	Suggested fix
Color matches brand/location palette	NEEDS INPUT	No brand guideline or palette was supplied for Nick Mayer Buick GMC of Dickson, so there is nothing to score against. Observed from the screenshots: black hero band, white and light-grey section backgrounds, and a bright blue for CTA buttons and accent bars.	Supply the palette (or run `page-generator-intake` for this rooftop), then re-score. Buick's current OEM identity is largely

Check	Verdict	Finding	Suggested fix
			monochrome, so the blue accent is the value to confirm first.
Font matches brand type stack	NEEDS INPUT	Computed font-family is `segoe-ui, sans-serif` on **both** body and H1. This is the DealerOn platform default — the page preloads five Segoe UI weights from `cdn.dlron.us/assets/fonts/segoe-ui/`. No Buick or GM brand face appears anywhere in the stack.	Supply the required brand type stack. Flagging plainly: a platform default font with no brand face is exactly the condition this check exists to catch, so I expect this to convert to FAIL once the standard is provided.
Right brand + location (logo/store, no cloned chrome)	PASS	Header logo is `/static/dealer-31568/logo.png`, title and alt "Nick Mayer Buick GMC of Dickson Dickson, TN". Buick and GMC OEM marks are the correct divisional logos. Footer NAP reads "Nick Mayer Buick GMC of Dickson	2211 Highway 46 South, Dickson, TN 37055

2.3 Per-location standards

Check	Verdict	Finding	Suggested fix
Image placement per location template	NEEDS INPUT	No location template or reference page was supplied. Additionally, all 8 vehicle images are **hotlinked from** `buick.com/content/dam/...` and therefore did not load in the offline render, so placement could not be judged visually — the screenshots show alt-text placeholders where the images belong. This is a limitation of reviewing a saved file, not evidence that the images are broken live. Alt text is present and descriptive on every one.	Supply the location template and either a live/staging URL or a rendered export with images resolved, then re-score. Separately: hotlinking OEM media from buick.com is a hosting and rights exposure — these should be properly licensed copies served from the client's own domain.
Layout standard followed	NEEDS INPUT	No layout standard was supplied. Observed: the section order does not match the approved copy (scored in 2.1), and the "Highlights at a Glance" module is a 5-item grid that leaves an uneven trailing row at desktop widths — two items sit alone under a row of three, with visible dead space to the right of "Safety".	Supply the standard. Independently, either balance the Highlights grid to an even count or set the trailing row to span, if that module survives the 2.1 fix at all.
No-bold policy (bold only on headers)	FAIL	Five `<strong>` runs are used as pseudo-headings in the "Highlights at a Glance" module: `<strong>Powertrain</strong>`, `<strong>Seating</strong>`, `<strong>Technology</strong>`,	If the module stays, convert each label to a real heading element (`<h3>`) styled to match, and remove the

Check	Verdict	Finding	Suggested fix
		`<strong>Exterior</strong>`, `<strong>Safety</strong>`, each sitting above a `<p>` inside `.trim-content`. These are labels doing a heading's job in body copy, which the policy prohibits. Note: the probe's `bold_pseudo_headings` detector returned 0 because these sit in a `div` rather than inline within a paragraph — the detector missed them, so do not rely on it alone for this check.	`<strong>`. If the module is removed under the 2.1 fix, this resolves with it. Worth logging the detector gap so the script can be improved.

2.4 Responsive

Check	Verdict	Finding	Suggested fix
Mobile (small/medium/large — no overflow, accordions work)	FAIL	**375 px is clean** — no horizontal overflow (scrollWidth 375 = clientWidth 375), text reflows, tap targets are usable, FAQ accordions render closed and correctly. **768 px overflows**: scrollWidth 816 vs clientWidth 768, a 48 px horizontal scroll. Cause is visible in the screenshot: the platform header's nav drawer renders **expanded** down the right edge with clipped labels ("Home / New / Shop / Pre-O / Cont / Spec / Serv / Finan / About / Rese"), pushing the viewport wider. Also at 375 the promo banner text is clipped mid-word ("AWAR..." in red). Both defects are in the DealerOn header and promo chrome, not the content block.	Fix the 768 px breakpoint so the nav collapses to the hamburger state rather than rendering expanded, and allow the promo banner text to wrap at narrow widths. Because both sit in platform chrome, this likely routes to the DealerOn theme rather than the content block — confirm ownership before assigning.
Desktop (laptop → wide — layout holds)	PASS	1440 px is clean (scrollWidth = clientWidth). 1280 px reports scrollWidth 1282 vs 1280, a 2 px difference consistent with a scrollbar or sub-pixel rounding artifact and not a visible overflow — confirmed against the screenshot. Section stacking, container widths, and CTA blocks hold at both widths. No orphaned modules.	None, beyond the Highlights grid trailing-row note in 2.3.

2.5 Structured data (schema completeness)

Applicable types by page type; mark inapplicable types N/A with a reason. A missing required field, or an absent applicable type, is a FAIL. Ten JSON-LD blocks were found.

Schema type	Verdict	Present / missing fields	Suggested fix
Vehicle / Product	FAIL	Two overlapping vehicle nodes. `Car` (`#buick-enclave-avenir`) — present: Name, Make, Model, Model Year, Body Type, Engine, Transmission, drive configuration. Missing: **URL, Trim, VIN, Stock/Availability, Price, Images, Exterior Color, Interior Color**. `Product` (`#enclave-avenir-inventory`) — present: Name, Make, Images. Missing: **URL, Model, Model Year, Trim, VIN, Stock/Availability, Price, Exterior Color, Interior Color, Body Type, Engine, Transmission**.	Consolidate to one vehicle entity rather than a `Car` and a `Product` describing the same thing. Then add the missing fields. Most of them are the same facts Stage 1 flagged as NEEDS INPUT (VIN, price, availability, colors), so this cannot be completed until the client supplies them — the schema gap and the Stage 1 gap are the same gap.
Offer	FAIL	**Entirely absent.** A model page is expected to carry `Offer` , and none of the 10 blocks contains one.	Add an `Offer` node with Price, Price Currency (USD), Availability (InStock/OutOfStock), Item Condition (New), and URL. Blocked on the same client facts as the row above.
AutoDealer	FAIL	All required fields (Business Name, Address, Phone, Opening Hours, Website URL) are present on every AutoDealer node — the failure is **entity duplication and a domain conflict**, not missing fields. The page carries **four** AutoDealer nodes: three hand-authored (`#business` , `#reviews` , and one more) plus the platform's own. One (`#reviews`) exists solely to carry an AggregateRating. More seriously, they disagree on the business's identity: the hand-authored blocks assert `https://www.nickmayerbuickgmcofdickson.com` throughout, while the platform block's `logo` , `image` , `sameAs` , and department URLs all point to **`nickmayerchevroletbuickgmcofdickson.com`** , with a Facebook handle of `NickMayerChevroletBuickGMCofDickson` .	**Decide this before further schema work:** confirm the store's correct legal/display name and canonical domain. If the rooftop is "Nick Mayer Chevrolet Buick GMC of Dickson", then the hand-authored blocks assert a business name and URL that do not match the entity, and the approved copy's entity name needs revisiting too (Stage 1 passed the name check against these same hand-authored blocks, so that PASS is only as good as this answer). Then collapse to a single AutoDealer node with one `@id` .
Organization	PASS	The page's own Organization node (`#organization`) has all four required fields: Name, Logo, Website URL, Contact	None. The `url` value is subject to the domain

Schema type	Verdict	Present / missing fields	Suggested fix
		Information. `schema_check.py` also flagged two further Organization objects as missing Logo, Website URL, and Contact Information — those are nested `manufacturer` references for Buick inside the vehicle nodes, where those fields do not apply. Not a defect.	decision in the row above.
BreadcrumbList	PASS	Complete 4-level `itemListElement`: Home → New Vehicles → Buick → 2026 Buick Enclave Avenir, with positions and item URLs on every level.	None for completeness. Two notes for Stage 3: every `item` URL uses the unconfirmed domain, and the level-4 item points to a filtered inventory search URL rather than this page's own canonical URL.
ImageObject	PASS	Present with Image URL, `contentUrl`, Name, Description (serving as caption/alt), `encodingFormat`, and `representativeOfPage`.	None for completeness. **Flag for Stage 3 / legal:** the node sets `creditText: "Buick"` but also `copyrightNotice: "© Nick Mayer Buick GMC of Dickson"` and `license` pointing at the dealer's own domain, for an image hotlinked from `buick.com`. The dealer should not assert copyright over an OEM asset. Also verify the file depicts the 2026 Avenir — the filename references 2025 campaign footage.
Review / AggregateRating	FAIL	**Three** AggregateRating blocks, all identical (ratingValue 4.4, reviewCount 23, bestRating 5, worstRating 1), attached to `Car` (#buick-enclave-avenir), `Product` (#enclave-avenir-inventory), and `AutoDealer` (#reviews). No reviews, ratings, or review module are visible anywhere in the rendered page — I searched the full rendered text and found none. Reviewer Information is absent from all three. Per the Stage 2 rule, an AggregateRating with no on-page reviews is a FAIL, not a pass. Two of the three also **misattribute** a dealer rating to a vehicle and to an inventory listing.	Remove all three AggregateRating blocks. If the dealer genuinely holds a 4.4/23 rating, it may be reasserted only on the dealer entity, only with the review source identified, and only with the matching reviews rendered on the page. Do not reattach a dealer rating to a `Car` or a `Product` in any case. This is the recurring fabricated-rating pattern and should be treated as removal-required rather

Schema type	Verdict	Present / missing fields	Suggested fix
			than a completeness note.
FAQPage	PASS	Present with a complete `mainEntity` array: all 7 Questions with `acceptedAnswer` text, matching the 7 `<details>` blocks in the DOM and the approved copy verbatim.	None. Keep schema and DOM in sync if the FAQ is edited during the 2.1 rebuild.

Open items to resolve before the gate opens

Blocking decision (resolve first) - **AutoDealer domain and name conflict.** Confirm the store's correct legal/display name and canonical domain. The page asserts `nickmayerbuickgmcofdickson.com` in hand-authored schema while platform data points to `nickmayerchevroletbuickgmcofdickson.com`. This decision affects the schema, the breadcrumb URLs, the ImageObject, and possibly the entity name in the approved copy.

Content (2.1) - Restore the three bullet lists (Powertrain, Interior, Technology Highlights) verbatim from the approved copy as list markup. - Remove the three unapproved sections, or route them through Stage 1 as new copy. The Clarksville and Waverly references cannot ship in any version. - Restore the Sources section and the Autoblog URL. - Remove the duplicated 5,000-pound towing sentence; restore the approved paragraph order in the reviewers section. - Set the H1 to the approved string; remove the doubled space. Restore the three subheadings and the full FAQ heading. Restore the approved section order.

Design and layout (2.2 / 2.3) - Supply the brand palette and type stack for this rooftop so color and font can be scored. Current font is the DealerOn Segoe UI default with no brand face. - Supply the location template, plus a live/staging URL or an export with images resolved, so image placement can be judged. - Convert the five `<strong>` labels in Highlights at a Glance to real headings, or remove the module. - Rehost the 8 hotlinked buick.com images as licensed copies on the client's domain.

Responsive (2.4) - Fix the 768 px breakpoint: the nav drawer renders expanded and clipped, causing a 48 px horizontal overflow. Allow the promo banner to wrap at 375 px. Both sit in platform chrome — confirm ownership.

Schema (2.5) - Remove all three AggregateRating blocks. - Add an `Offer` node. - Consolidate the duplicate `Car` / `Product` vehicle entities and the four AutoDealer nodes. - Add the missing vehicle fields (URL, Trim, VIN, Stock/Availability, Price, Exterior Color, Interior Color) once the client supplies them. - Correct the ImageObject copyright claim on the OEM asset; verify the hero image is a 2026 Avenir.

Process note - This page was built and Stage-2 reviewed while its Stage 1 gate is still open (GATE: FAIL, 2 fail / 9 needs input). The 2.1 rebuild should be done against the *corrected* Stage 1 copy, not the current draft, or the build will be re-done twice. Several items above (VIN, price, colors, availability) are the same facts Stage 1 is waiting on.
